

FIG. 1

FIG. 2

FIG. 3

- I lag phase
- II rapid wound contraction phase
- III plateau phase

FIG. 4A

Single and double asterisks signify that the STZ-Diabetic group ($n=5$) differed from the normal-untreated group ($n=10$) with a $P < 0.05$ and $P < 0.005$ by Mann Whitney test (T-test), respectively.

FIG. 4B

Single and double asterisks signify that the STZ-Diabetic group (n=5) differed from the normal-untreated group (n=10) with a $P < 0.05$ and $P < 0.005$ by Mann Whitney test (T-test), respectively.

FIG. 5

FIG. 6A

n=5, Kruskal-wallis test $p > 0.05$

FIG. 6B

n=5, Kruskal-wallis test $p>0.05$

- Normal, untreated
- Diabetic, treated with 676 after DM induction
- Normal, treated with 676 after wound induction
